

FORM FOUR CLUSTER KCSE MODEL11

BIOLOGY PAPER 1 ANSWERS

Answer all the questions in the spaces provided.

1. a) Biochemistry; (1mk)
b) Entomology; (1 mark)
2. a) Mitochondrion; rej mitochondria (1mk)
b) Matrix; (1mk)
c) Increases surface area for attachment of respiratory enzymes ; (1mk)
Site where respiration occurs;
3. i) Continuous variation; (1mk)
ii) Discontinuous variation; (1mk)
iii) AA, AO; Rej one genotype. (1mk)
4. a (i) Carbon (IV) oxide; rej IV (iv) 2mks
(ii) Water;
b. Deamination; (1 mark)
5. i) Study of a single species within an ecosystem ; (1mk)
ii) Specific locality where an organism lives; (1mk)
iii) -Absence of cuticle to enhance /speed up gaseous exchange;
-Stomata found only on the upper epidermis to allow efficient gaseous Exchange;
-Presence of aerenchyma tissue /large air space to enable it to float / buoyant/storage of air;(1mk)
(mark the first one)
6. a)Development of an ovary into a fruit without fertilization ; (1mk)
b) Auxins / IAA;
Gibberellins /Gibberellic acid; (first one) (1mk)
7. a)Gymnospermaphyta; (1 mark)
b) Presence of needle -like leaves /show xerophytic characteristics; (any correct)
-Produce naked seeds;/seeds not enclosed with an ovary wall;
-Non flowering;
-Xylem made up of (mainly) tracheids;
-Phloem lack companion cells; Any 1st 2 (2mks)
8. Lemon juice contains ascorbic acid ;which decolorizes DCPIP ; (2mks)
9. a)Metaphase 1 ; Rej metaphase alone.

Reason homologous chromosomes line up together at the equator; (1mk)

b)

10. a) Oxygen; (1 mark)
b) Reutilized for respiration;
(Excess) released to the atmosphere; (any one correct) (1mk)
11. Thin for faster diffusion of gases;
Moist to dissolve diffusing gases;
Vascularised to transport gases; (3mks)
12. a) The visking tubing is semi-permeable and allows the passage of small glucose molecules into the beaker by diffusion; (1mk)
b) i. Volume of liquid in the beaker decreased; (1mk)
ii. Volume of liquid in visking tubing increased; (1mk)
13. a) Storage of sperms; (1mk)
b) Provides alkaline fluid that neutralizes vaginal fluids;
-Activates sperms; (any one correct)
14. P-Axile placentation; (1mk)
Q-Parietal placentation; (1mk)
R-Free central placentation; (1mk)
15. -Regulates PH of the body fluids;
-Regulates body temperature;
- It's a medium of exchange of material e.g nutrients and wastes.
-Transport materials e.g Oxygen, nutrients;
-(Contain WBC that) protects the body against infections;
-(Contains water ,mineral ions and soluble proteins which)regulates osmotic pressure of body fluids;
Any 1st three correct (3mk)
16. i. Luteinizing hormone; (1mk)
ii. Repair and healing of uterine wall;
-increased level stimulates pituitary glands to secrete LH;
iii. Development of ovarian follicle; Causes production of Oestrogen by ovarian tissue;
17. a) Enzymes are organic catalysts which regulate biochemical reactions in the body cells; while hormones are organic chemicals /compounds which Influence biological activities; (2 marks)

- b) Substrate specific; (1mk)
18. a) Ability of the body to develop resistance against disease micro-organism in the body;
 b) Natural -is inherited and transmitted from parent to offspring (i.e passed from Parent to offspring);
 Acquired-develops after an infection(suffering) from a disease or through vaccination;
 c) Measles; /polio;/tetanus;/whooping cough;/ (any 1 correct)1mk
19. a) Concentrates light from the source and directs it to the specimen; (1 mark)
 b) Aperture below the condenser that regulates amount of light passing through the condenser; (1mk)
20. a) X-Guard cell; (1mk)
 W-stoma; rej stomata. (1mk)
 b) Have chloroplasts that help in the process of photosynthesis;
 Have thin outer wall and thick inner wall to enhance bulging during opening of stomata; (1mk)
21. a) Hypogeal germination is where the cotyledons remain underground while epigeal germination is where cotyledons emerge above the ground; (mark as a whole) 1mk
 b) -Presence of germination inhibitors ;Acc abscissic acid;
 -Immature embryo; -Absence of enzymes/hormones that facilitate germination;
 -Hard / impermeable seed coat; any 1st 2 correct. (2mks)
22. a) Presence of more than two sets of chromosomes in a cell; (2mk)
 b) -Albinism;
 -Haemophilia;
 -Colour blindness;
 -Sickle cell anemia; (any 1st three) 3mks
23. i. Do not have producer/producer missing; (1mk)
 ii. Lizard to chicken energy flow is reversed; (1mk)
24. a) To investigate necessity of carbon(IV)Oxide in photosynthesis; (1mk)
 b) i. To absorb carbon(IV)Oxide gas; (1mk)
 ii. It was the control experiment leaf; (1mk)
25. a) -Plasma proteins; rej specific proteins -Blood cells; Rej specific blood cells. (2mk)
 b) They are large in size ;to filter through the tiny pores of the capillaries.(1mk)
26. a) Lymph nodes / liver; (1mk)
 b) Kidney tubules / liver /pancreas; (1mk)
27. a) Transpiration is the loss of water inform of water vapour while guttation is the loss of water in form of droplets; (1mk) (mark as a whole)
 b) -loss /removal of excess water; -enhances absorption of water; (2mks)

28. i. Inability of the pancreas to secrete insulin; (1 mark)
- ii. Inability of the pituitary gland to secrete Antidiuretic hormone;(1 mark) (Rej ADH alone)
29. a) Premolar /molar; (1 mark)
- b) Has two roots /has cusps /has broad surface;
- c) Has cusps to increase surface area for grinding food;
- d) Has a broad surface to increase surface area for chewing/grinding;
- e) Has two roots for firm anchorage in the jaw; (any one correct) 1mk
30. a) Organic evolution is the progressive development of complex organisms from simple pre-existing life forms over a long period of time; (1mk)
- b) i. Analogous structures –structures that have different embryonic origin but modified to perform the same function in different animals; (1mk)
- ii. Comparative embryology -comparing embryos of vertebrates; (to establish their phylogenic evolutionary relationship) 1mk
