## PHYSICS PAPER 1 FORM 4

NAME	ADM
CLASS	

1. What is the reading of the vernier eallipers shown in the fly below if it has a positive error of 0.02cm? (3mks)

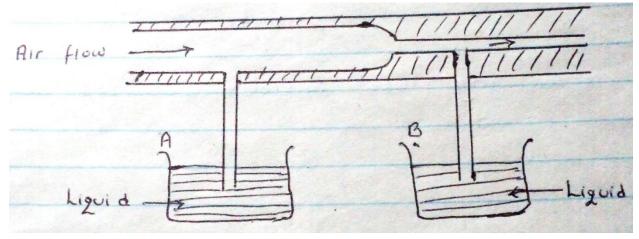

2. The figure below shows apparatus used to observe behavior of smoke particles in a smoke cell.

- a) State a reason why smoke particles are used in the experiment. (1mk)
- b) State the observation made. (1mk)
- c) What would happen if temperature was lowered? (1mk)
- 3. Explain why fish can survive under water when the surface is already frozen. (1mk)
- 4. State one way on which the stability of the can be increased. (1mk)

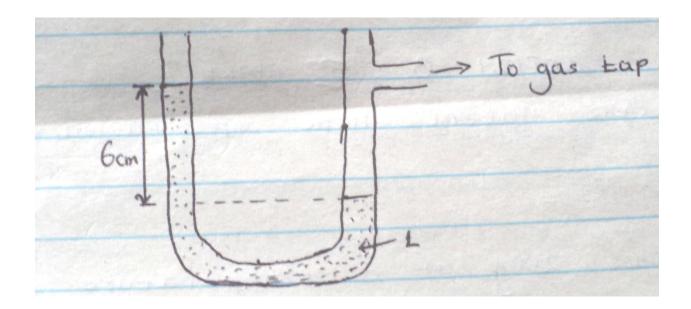

5.	A stone is thrown horizontally from a building that is 50m high above a horizontal ground. The stone
	hits the ground at a point, which is 65m from the foot of the building. Calculate the initial horizontal
	velocity of the stone. (g=10ms <sup>-2</sup> ) (3mks)

6. The figure below shows air flowing through a pipe of non-uniform cross-sectional area .Two pipes A and B are dipped into liquids as shown below.

- a. Indicate the levels of the liquids in pipe A and B. (1mk)
- b. Explain your answer in (a) above. (1mk)
- 7. When a mercury thermometer is used to measure the temperature of hot water, it is observed that the mercury level first drops before beginning to rise. Explain (2mks)

8. Figure below shows a u-tube manometer containing a liquid L. One end connectected to a gas tap. Given that the atmosphere pressure is  $1.0 \times 10^5$  pa, determinate the pressure of the gas (density of liquid L is  $900 \text{kg/m}^3$ , g=10 N/kg) (2mks)

9. The figure below represents part of a tape pulled through a ticker-timer by trolley moving down an inclined plane. If the frequency of the ticker-timer is 50Hz, calculate the acceleration of the trolley. (3mks)

10. Explain why a glass container with thick glass walls is more likely to crack than one with a thin wall when a very hot liquid is poured into it. (2mks)

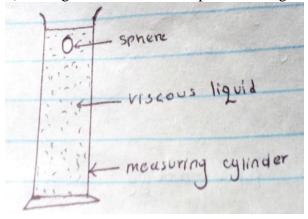

11. Find the amount of work in stretching a sprig constant 25N/M when its lenghth is increased from 0.1n to 0.2m. (3mks)
SECTION B (55MARKS)  12. A) Define specific latent heat of fusion of a substance. (1mk)
b) Water of mass 200g at a temperature of $60^{\circ}$ c is put in a well lagged copper calorimeter of mass of 80g. A piece of ice at $0^{\circ}$ c and mass 20g is placed in the calorimeter and the mixture stirred gently unt all the ice melts. The final temperatures, T of the mixture are then measured. Determine: i) The heat absorbed by melting ice at $0^{\circ}$ c. (2mk)
ii) The heat absorbed by melted ice (water) to rise to temperature. T (Give the answer in terms of T (2mks)
ii) The heat lost by warm water and the calorimeter. (2mks) (Give the answer interms of T)
iii) The heat lost by warm and the calorimeter (2mks) (Give the interms of T)
IV) The final temperature T of the mixture. (Specific latent heat of fusion of ice=334,000 Jkg specific heat of water =4200Jkg <sup>-1</sup> , specific heat capacity of copper =900Jkg <sup>-1</sup> k <sup>-</sup> ) (3mks)

The force of friction between wood and surfact of the fo	oor below. Another ball bearing Y leaves the odge of the table and:  The horizontal distance travelled by Y before hitting the flow of the table top above the floor level.  A bullet mass of 22g travelling horizontal with a velocity of 1978g which rests on a rough horizontal surface. After impand come to rest when the block has travelled a distance of it.  The velocity of bullet and wood after impact. (2mk iii)  The force of friction between wood and surface. (2mk iiii)  The force of friction between wood and surface. (2mk iiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiii	oor below. Another ball bearing Y leaves the odge of the table horind:  The horizontal distance travelled by Y before hitting the floor. (2)  The vertical distance of the table top above the floor level. (2mk:  A bullet mass of 22g travelling horizontal with a velocity of 300 1978g which rests on a rough horizontal surface. After impact the and come to rest when the block has travelled a distance of 5M. (i)  The velocity of bullet and wood after impact. (2mk)  The force of friction between wood and surface. (2mks)  A car starts from rest and accelerates uniformly at 2m/s² for 5 sec 5 m/s² for 2 more seconds. The car is then brought to rest in another Sketch a velocity time graph for this motion. (2mks)	oor below. Another ball bearing Y leaves the odge of the table horizontally and:  The horizontal distance travelled by Y before hitting the floor. (2mks)  The vertical distance of the table top above the floor level. (2mks)  A bullet mass of 22g travelling horizontal with a velocity of 300ms <sup>-1</sup> stri 1978g which rests on a rough horizontal surface. After impact the bullet and come to rest when the block has travelled a distance of 5M. Calcula i)  The velocity of bullet and wood after impact. (2mk)  The force of friction between wood and surface. (2mks)  A car starts from rest and accelerates uniformly at 2m/s <sup>2</sup> for 5 seconds be 5 m/s <sup>2</sup> for 2 more seconds. The car is then brought to rest in another 2 seconds a velocity time graph for this motion. (2mks)	oor below. Another ball bearing Y leaves the odge of the table horizontally with and:  The horizontal distance travelled by Y before hitting the floor. (2mks)  The vertical distance of the table top above the floor level. (2mks)  A bullet mass of 22g travelling horizontal with a velocity of 300ms <sup>-1</sup> strikes a bullet and the strick of the table top above the floor level. (2mks)  A bullet mass of 22g travelling horizontal with a velocity of 300ms <sup>-1</sup> strikes a bullet and come to rest when the block has travelled a distance of 5M. Calculate:  i) The velocity of bullet and wood after impact. (2mk)  ii) The force of friction between wood and surface. (2mks)	oor below. Another ball bearing Y leaves the odge of the table horizontally with a veloud:  The horizontal distance travelled by Y before hitting the floor. (2mks)  The vertical distance of the table top above the floor level. (2mks)  A bullet mass of 22g travelling horizontal with a velocity of 300ms <sup>-1</sup> strikes a block 1978g which rests on a rough horizontal surface. After impact the bullet and the block and come to rest when the block has travelled a distance of 5M. Calculate:  i) The velocity of bullet and wood after impact. (2mk)  ii) The force of friction between wood and surface. (2mks)	oor below. Another ball bearing Y leaves the odge of the table horizontally with a velocity of and:  The horizontal distance travelled by Y before hitting the floor. (2mks)  The vertical distance of the table top above the floor level. (2mks)  A bullet mass of 22g travelling horizontal with a velocity of 300ms <sup>-1</sup> strikes a block of woo 1978g which rests on a rough horizontal surface. After impact the bullet and the block mov and come to rest when the block has travelled a distance of 5M. Calculate:  i) The velocity of bullet and wood after impact. (2mk)  ii) The force of friction between wood and surface. (2mks)	The horizontal distance travelled by Y before hitting the floor. (2mks)  The vertical distance of the table top above the floor level. (2mks)  A bullet mass of 22g travelling horizontal with a velocity of 300ms <sup>-1</sup> strikes a block of wood of m 1978g which rests on a rough horizontal surface. After impact the bullet and the block move toge and come to rest when the block has travelled a distance of 5M. Calculate:  i) The velocity of bullet and wood after impact. (2mk)  ii) The force of friction between wood and surface. (2mks)  OA car starts from rest and accelerates uniformly at 2m/s <sup>2</sup> for 5 seconds before accelerating again a 5 m/s <sup>2</sup> for 2 more seconds. The car is then brought to rest in another 2 seconds. Sketch a velocity time graph for this motion. (2mks)

b) A ball of mass 2kg is whirled at the end of a string in a horizontal circular path at a speed of 5m/s<sup>-1</sup>. If the string is 2.0m long find, Angular velocity of the stone? (3mks) The tension of the string. ii. 15. The figure below shows a block of mass 30.0kg being pulled up a slope by a force F at a constant speed. The friction force on the block is 200 N. A) I) on the same figure above name and indicate the other forces acting on the block. (2mks) II) Determine the force acting on the block down the slopes. (2mks) Determine the value of F (2mks) iii) B. On reaching the top of the slopes. The block is left to run freely down the slopes. i) Which of the force previously acting on the block would then act in the opposite direction? (1mk)

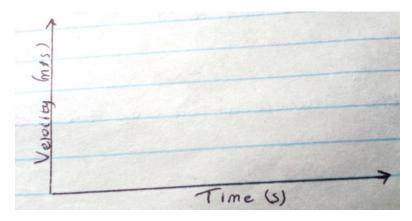

14. A) State two important factors to be considered when selecting the banking angles of a road.

- II) Determine the acceleration of the block down the slope. (2mks)
- III) What is the effect of increasing the angle of the slopes on your answer in (ii) above? (1mk)
  - 16. A) i) State Newton's second law of motion. (1mk)
    - ii) The figure below shows a sphere moving in a viscous liquid in a tall measuring cylinder.

Show on the diagram the force acting on the sphere. (3mks)

iii) Sketch on the Cartesian plane below a graph of the variation of velocity with time until the ball attains terminal velocity.

- b) i. State Boyle's law. (1mk)
- ii. What is the absolute zero temperature? (1mk)

iii). A bicycle pump with the exit hole closed contains 80cm of air at 760 mmHg pressure and a temperature of 10c. When the air was compressed to 38cm under a pressure of 1700mmHg pressure, its temperature rises. Calculate the rise in temperature. (2mks)
